

TOTAL SUPPLY CHAIN AND ASSET CONTROL

Protected cold treatment solution

Protected Cold Treatment is a patented smart solution by ArrowSpot ensures the cargo safety and enables it to enter regulated import countries.

Cold treatment is a process used to disinfect and protect fruits from pests while in transit.

Countries require that agricultural produce, especially citrus fruits, undergo a verified CT process in order to pass customs. Cold Treatment protocols vary depending on the country and the type of produce.

ArrowSpot's Protected Cold Treatment continuously monitors the temperature of the cargo and based on smart algorithm Automatically changes the reefer's set point to maintain the cargo's temperature within the relevant protocol permissible limits to ensure its safety with no intervention.

Information is presented on dashboard for management control.

Since its launching in 2017, ArrowSpot's Protected Cold Treatment solution

+7000 cargos and
successfully brought cargo

worth **+250 Million** US \$
to destination
